TWENTY-FIRST MEETING
of the
INTERNATIONAL COMMITTEE of LEGAL METROLOGY

Paris — 16, 17, 18 April 1986

The International Committee of Legal Metrology met, convened by its President Mr. K. BIRKELAND, in Paris, in the premises of the Office International des Epizooties, on 16, 17 and 18 April 1986.

On the occasion of this meeting, the thirtieth anniversary of the establishment of the International Organisation of Legal Metrology was commemorated ; a report of this celebration is published separately.

PERSONALITIES PRESENT

Were present :	Mrs. Messrs.	
Federal Republic of Germany	: W. MÜHE	V/Président of the Committee
German Democratic Republic	: K. HASCHE	Member of the Committee
Australia	: G. HARVEY	
Austria	: R. LEWISCH	Member of the Committee
Belgium	: M.L. HENRION (Mrs)	Member of the Committee
Bulgaria	: P. ZLATAREV B. VELITCHKOVA (Mrs)	Member of the Committee
Cameroon	: E. DIFFO	Member of the Committee
Canada	: R.G. KNAPP J.P. LACHAINE	Member of the Committee
People's Republic of China	: SONG YONGLIN LUO ZHENZHI WEI HONG (Mrs)	Member of the Committee
Democratic People's Republic of Korea	: RI HOING SIK KIM YONG OU	
Cuba	: J. GOMEZ ROSELL	Member of the Committee
Denmark	: O. PETERSEN	Member of the Committee
Spain	: M. CADARSO	Member of the Committee
United States of America	: D.E. EDGERLY	Member of the Committee
Finland	: U. LÄHTEENMÄKI (Mrs)	Member of the Committee
France	: P. BERTRAN A. LE BOUCH	Member of the Committee
Hungary	: D. BELEDI K. ZSDANSZKY	Member of the Committee
Indonesia	: G.M. PUTERA	Member of the Committee
Ireland	: P. FANNING	Member of the Committee
Italy	: C. AMODEO V. PROIA	Member of the Committee
Japan	: K. IIZUKA	Member of the Committee
Kenya	: P.A. AYATA	Member of the Committee
Monaco	: A. VATRICAN	Member of the Committee
Norway	: K. BIRKELAND J. Chr. LANGE	President of the Committee
Pakistan	: M. ASAD HASAN	Member of the Committee
Netherlands	: J. NIEUWLAND	Member of the Committee
Poland	: T. PODGORSKI Z. PESTRAKIEWICZ	Member of the Committee
United Kingdom	: P.B. CLAPHAM	Member of the Committee

Sweden	: R. OHLON H. LUNDAHL	Member of the Committee
Switzerland	: P. KOCH	Member of the Committee
Tanzania	: A.H.M. TUKAI	Member of the Committee
Czechoslovakia	: L. ŠUTEK M. BERAN	Member of the Committee
U.S.S.R.	: L.K. ISSAEV A.S. VISHENKOV	V/President of the Committee
Yugoslavia	: M. MEZEK	Member of the Committee

Personalities invited : Messrs.

A.J. van MALE, former President of the Committee
A. PERLSTAIN, former Member of the Committee
Z. REFEROWSKI, former Assistant Director of the Bureau

International Bureau of Legal Metrology :

B. ATHANÉ, S.A. THULIN, F. PETIK, A.B. TURSKI.

Interpreters :

E. BROS-BRANN, A. GIANNINI, B. HÉTIER, C. VESTERMAN.

Delegations of votes :

J. TAVORA VEADO (Brazil) to M. CADARSO (Spain)
F.A. SOBHY (Egypt) to K. BIRKELAND (Norway)
M. BENKIRANE (Morocco) to P. BERTRAN (France) (*)
A. BEN GAID (Tunisia) to K. BIRKELAND (Norway)

Committee Members of the following States were excused :

Cyprus, Rep. of Korea, Ethiopia, Greece, Guinea, India, Israel, Romania,
Sri Lanka, Venezuela.

States which have not appointed their representative on the Committee :

Algeria, Lebanon.

(*) Delegation of vote received on 17 April.

OPENING ADDRESS

by Mr. K. BIRKELAND

President of the International Committee of Legal Metrology

Ladies and Gentlemen, Dear Colleagues,

After the commemorative ceremony (*) of 30 years of OIML which allowed us to realise how hard and intelligently the creators of OIML have toiled, it is now time for us to start our work with, I hope, a will to do as well as our predecessors so that in 20 or 30 years time our successors may have the same praise for us.

First of all my thanks to you all for keeping our rendezvous which I arranged for about 18 months after our meeting in Helsinki.

In 18 months many changes occurred in the composition of our Committee.

Firstly, I am happy to greet the representative of the People's Republic of China, our 50th Member State, which joined us in April 1985 and participates for the first time officially in our work. Welcome Mr. SONG, you are already well known to many of us having participated in our meeting in Helsinki, in October 1984. Welcome also to the other Members of your Delegation.

As far as the other Member States are concerned the changes are as follows :

- for the German Democratic Republic Mr. LIERS whose retirement was announced in Helsinki has been replaced by Mr. HASCHE,
- for Australia it is Mr. HARVEY who replaces Mr. PETRY who had to retire for health reasons,
- for Brazil Mr. VEADO has replaced Mr. dos SANTOS,
- for Cameroon Mr. DIFFO has replaced Mr. NDOUGOU,
- for Republic of Korea Mr. CHANG has replaced Mr. KIM,
- for Democratic People's Republic of Korea Mr. KIM HI-SANG has replaced Mr. KIM SUNG-HWAN,
- for Greece Mr. DESIS has replaced Madam GITZENI,
- for Hungary Mr. BELEDI has replaced Mr. GACSI,
- for Indonesia Mr. PUTERA who has participated in many meetings of the Committee and Conferences was nominated to replace Mr. HAROEN,
- for Ireland Mr. FANNING has replaced Mr. McGRATH,
- for Netherlands Mr. NIEUWLAND, well known by all our Members, has replaced Mr. BIJLOO,
- for United-Kingdom Mr. CLAPHAM, who has left the National Physical Laboratory to direct the National Weights and Measures Laboratory, has replaced Mr. SOUCH,
- for Switzerland, Mr. KOCH has replaced Mr. PERLSTAIN who as we were informed in Helsinki has taken his retirement,
- for Tanzania Mr. TUKAI who participated in our meeting in Helsinki was nominated to replace Mr. KABALO, and finally,
- for Yugoslavia Mr. MEZEK has replaced Mr. BEVK.

(*) see report published separately.

One State which had not yet designated its Member of the Committee is represented here ; it is Pakistan whose delegate is Mr. ASAD HASAN.

To all these new Members, or rather all those who are present I express my most warm welcome.

This 21st Committee meeting, placed between the 7th and 8th Conferences is of particular importance especially taking into account the evolution and speedy diversification of our activities, the important problems which we have to resolve in order to organize our work, the new questions which face a certain number of International Institutions, us amongst them.

There is a great number of points on our Agenda and this indicates that in less than three days we have to review almost all the problems concerning OIML. In many cases we have to make certain that the decisions of the Conference have been correctly implemented.

Three points, in particular, require our attention.

Firstly, the planning of work.

Several reasons have led us to attempt to improve the planning of the work of our Secretariats : increased number of Reporting Secretariats, increased interaction between the OIML Secretariats themselves and also with the working groups of other Institutions, necessity to define the priorities because our resources do not permit us to deal with all the problems at the same time, necessity to provide a clear picture of our activities for those outside OIML.

The planning techniques themselves do not provide a solution of such problems but they help in finding the most rational solutions. Of course, to achieve this, planning has to be flexible, properly adapted, in brief intelligent ! On the other hand, planning by itself should not create useless work ; planning is not an end in itself, it is a useful tool. I think this is the way planning, of which certain conclusions will be examined by us today, was regarded by the Presidential Council as well as by all the Pilot Secretariats.

The second subject which I would like to mention on this occasion is certification.

Two years ago we decided to interrupt our attempt of setting up an OIML Certification System, because on the strength of available evidence it seemed that such a system could not be set up immediately. However, this break is only temporary and we must be ready to take up our studies again as soon as the right moment arrives in the future, perhaps even the near future.

Whilst we are waiting, punctual actions should allow us to prepare this future. In this sense the 21st meeting assumes a special importance because a certain number of these actions are the subject of decisions which you have to take. Our present objective is, above all, to pave the way which would lead to an OIML Certification System, whatever its form. For this purpose also, we have to continue our co-operation with all the other International Institutions, working in the field of certification.

The third subject I would mention is not a point of the Agenda. It is however of extreme importance and in addition it allows me to state with satisfaction that justifiably any confidence in the technical capabilities of OIML is not misplaced.

In fact, even if it is not yet resolved in every detail, the problem of the electronic measuring instruments was the subject of studies and of really decisive conclusions.

The basic International Document is being printed ; right now, draft Recommendations are being elaborated and one of those, the one on electronic weighing, is being submitted to our vote.

The co-operation with IEC is proceeding well and other Institutions follow the footsteps of OIML and are ready to utilise the results of our work.

May I congratulate all those who contributed to this success ; in particular, the experts of SP 2-Sr 6 and SP 7-Sr 2, the Netherlands and the USA, helped by their Danish colleagues, the Bureau and all Members of their International Working Groups were, after several years of intensive work in almost annual meetings, able to resolve almost all the problems put to them, and meet the challenge they were facing.

Ladies, Gentlemen, Dear Colleagues,

Nothing is perfect in our world and certainly there remains a lot to be done to improve OIML, to accelerate its work and to find new resources.

Nevertheless, a lot of progress has been made during the last years, extending the growth which our Organization has experienced since its creation.

This success is in a great measure your doing since it is you as Members of the Committee who are able to convince your Authorities, your collaborators, and also the other national bodies concerned with metrology that it is necessary to work with OIML because our Organization could, within its competence and due to its efficiency, help them to resolve the standardization problems which they are facing.

We shall now begin our work but before I ask the Director of the Bureau to start with the roll-call of the participants, perhaps the representative of our new Member-State would wish to say a few words ?

Mr. SONG the floor is yours.

*
**

ADDRESS of Mr. SONG YONGLIN

OIML Member, People's Rep. of China

Mr. President, thank you very much for the great honour of allowing me to say a few words to the meeting to-day. To begin with, I am honoured to be allowed to participate in the meeting as representative of the People's Republic of China and I hope that this meeting will be a very great success.

Last year, 1985, was for us an extraordinary year. Two very important events took place, the first the 30th anniversary of the creation of OIML, the second, the official accession of our Country as the 50th OIML Member State. For this reason allow me to express my warmest congratulations in the name of the whole of the Chinese delegation.

As a new OIML Member State we do not know as yet very well how we should or could contribute our efforts to the activities of OIML but we shall take part in the development of OIML.

To conclude I hope that this meeting will be a great success, thank you Mr. President.

On the occasion of the two events, the accession of the People's Rep. of China and the 30th anniversary of the creation of OIML I have the pleasure to hand over a gift in the name of the State Bureau of Metrology of the People's Republic of China. This gift is a reproduction of a capacity measure dating back 2 000 years to the times of the Shing dynasty.

*
**

Mr. BIRKELAND warmly thanks Mr. SONG YONGLIN for the gift and for the participation of the People's Republic of China in the OIML work.

Roll-call of delegates — Quorum

After these addresses a roll-call of the delegates was made and it was found that 38 Committee Members were present or represented, out of a total of 48 (2 States not having nominated their representatives). The statutory quorum of 3/4 was reached.

Adoption of the Agenda

The Committee adopted the following agenda :

1. Approval of the report on the 20th Committee meeting
2. Member States and Corresponding Members
 - 2.1. New accessions - Anticipated accessions
 - 2.2. Examination of the situation of some Member States or Corresponding Members
3. Financial situation
 - 3.1. Approval of the accountant report for 1984
 - 3.2. Examination of the accountant report for 1985
 - 3.3. Examination of the financial estimates for 1986
4. Bureau staff
 - 4.1. Examination of posts for which contracts expire in the near future
 - 4.2. BIML staff regulations - General information and examination of individual cases
 - 4.3. OIML retirement plan
5. Implementation of the decisions of the 7th Conference
6. Planning of work
 - 6.1. Examination of the 1985-1988 draft work programmes
 - 6.2. Adoption of the final work programmes
 - 6.3. Directives for future planning
7. Work of Secretariats
 - 7.1. Examination of the state of progress of the work
 - 7.2. Provisional adoption of draft International Recommendations
 - 7.3. Different types of OIML publications
8. Role and responsibility of CIML Members
9. Developing Countries
10. Relations with other International Institutions
11. OIML Bulletin
12. OIML seminars
13. OIML certification
 - 13.1. Various activities
 - 13.2. Examination of the draft International Document « Guidelines for bi- and multilateral arrangements on the recognition of test results, pattern approvals, verifications »
 - 13.3. Directives for future activities
14. Report on activity of BIML
15. Preparation of the 8th Conference
16. Preparation of the 22nd Committee meeting

Presidency and Vice-Presidency of the Committee

Closure of the meeting

REPORT ON THE DISCUSSIONS

1. APPROVAL OF THE REPORT ON THE 20TH COMMITTEE MEETING

The report is approved without modification.

2. MEMBER STATES AND CORRESPONDING MEMBERS

2.1. New accessions-Anticipated accessions

After Mr. BIRKELAND has recalled the accession of the People's Republic of CHINA, in April 1985, Mr. ATHANÉ indicates that several countries have contacted BIML with the intention of joining OIML, in particular PORTUGAL and SAUDI ARABIA. Other countries intend to join as Corresponding Members.

2.2. Examination of the situation of some Member States or Corresponding Members

Mr. ATHANÉ indicates that he made final contact with FIDJI and JAMAICA, Corresponding Members who have not paid their subscriptions. No reaction followed and, in conformity with the 7th Conference, these two Corresponding Members are considered to be « in suspension ». All correspondence and dispatch of documentation has stopped between the Bureau and the two countries who could be reinstated if they pay the amounts due.

3. FINANCIAL SITUATION

3.1. Approval of the accountant report for 1984

No comment was received on this report and the report is adopted by the Committee, who instructs its President and the Director of the Bureau to submit it to the 8th Conference.

3.2. Examination of the accountant report for 1985

Mr. ATHANÉ presents this report which was sent to the Committee Members too late to be examined by the financial Authorities of the Member States and to be adopted by the Committee in session.

After this presentation, the Committee instructs its President and the Director of the Bureau to submit the report for adoption during its 22nd meeting.

3.3. Examination of the financial estimates for 1986

Mr. ATHANÉ presents these estimates which were already submitted to the Committee Members by correspondence. It appears that the actual expenses for most of the budgetary lines, will be equal to or even less than the amounts authorized by the 7th Conference if recalculated to take into account the reduced inflation in France. For certain budgetary lines corresponding to the expenses which are not evenly distributed over the four years of the financial period, the comparison is not so easy and certain of those which exceed the authorization are explained. It is evident however that the receipts are noticeably greater than estimated by the Conference.

Mr. CLAPHAM is disturbed by the considerable overruns of the printing costs for the years 1985 and 1986. He understands that these expenses would be greater especially for the year or two years which follow a meeting of the Conference, but he considers that in any case, the credits voted by the Conference for this purpose will be greatly exceeded.

Mr. ATHANÉ recognizes that the decisions of the Conference were taken on the basis of under-estimating the cost of printing. In fact :

- on the one hand the Bureau has considered appropriate to print documents which up to now were produced in the form of photocopies (for example : the English language version of the report on the Conference),
- on the other hand the work of the Secretariats has increased and, in addition to the International Recommendations sanctioned by the Conference, a great number of International Documents will be printed,
- finally, the Bureau has undertaken to publish or to republish certain documents of general character (Working Method, List of Secretariats, Guide...).

Mr. ATHANÉ concludes that in his opinion the OIML publications are the « image » of the Organization and that the greatest care should be taken in this respect even if it is expensive. He proposes that the 8th Conference should carefully examine this question.

Mr. CLAPHAM declares himself satisfied with the explanations of the Bureau.

In reply to questions by Mr. EDGERLY, Mr. ATHANÉ gives the following indications :

- a word processor would be bought by the Bureau, end of 1986 or beginning of 1987,
- the amounts of the receipts originating from the sale of publications appears on the annual accountant reports and represent about 1 % of the OIML budget.

In reply to a question from Mr. MÜHE, it is explained that the recent European monetary rearrangement will have no effect on the contributions of the Member States expressed in French-Francs, and will have very little effect on the OIML expenses.

4. BUREAU STAFF

4.1. Examination of posts for which contracts expire in the near future

On the proposal of Mr. BIRKELAND, the Committee accepts the request of the Hungarian Authorities and of Mr. Petik to extend his contract for a period of two years starting from the end of his current contract.

In addition, Mr. BIRKELAND indicates that he will proceed, during 1986, with the nomination of a successor for Mr. TURSKI ; he recalls in this connection that the post in question has a specific character which requires the holder to be selected from candidates presented solely by the English speaking States and not by all the Member States as it is the case for the other officers of the Bureau.

4.2. BIML staff regulations - General information and examination of individual cases

Mr. ATHANÉ recalls that the BIML staff regulations were adopted by the Committee in 1972 (replacing the former regulations) and were then modified several times. The Bureau has the intention to update and to publish these regulations.

In addition, the Committee accepts two proposals made by the Director of the Bureau concerning the situation of some of the staff :

- the work of the Administrator having greatly increased since the creation of BIML, with in particular, wider financial responsibility and accounting work, the salary scale of this Officer is modified,
- two of the staff, the Principal secretary and the Documentation clerk, having joined the Bureau very young, have now reached the last steps of the salary scales ; the Director of the Bureau is authorized to extend their salary scales by one or two additional increments (this decision applying personally to the two staff members in question and not to the posts they occupy).

On a proposition by Mr. EDGERLY, supported by Mr. ISSAEV, Mr. BIRKELAND decides that the Presidential Council should examine the total of the salaries of the personnel of the Bureau comparing them with the salaries of other Organizations (in particular BIPM) and if necessary prepare proposals for the 8th Conference.

4.3. OIML retirement plan

Mr. ATHANÉ gives reasons for which the Committee is requested to modify two articles of the rules of OIML retirement plan, so that the interests produced by the moneys of the retirement fund be transferred into the general OIML budget, and not into the retirement fund :

- the present system, in order to be managed conveniently, would require a special bank account for the retirement fund, that is an additional OIML account, OIML using already 7 different accounts,
- the retirement fund would then include a part which could not be calculated in advance because of varying interest rates,
- in order to improve the income from the available moneys it would be preferable to be able to invest larger sums whilst on its own the retirement fund could produce only limited interests,
- the fact of transferring the interests either into the retirement fund on the general OIML budget would not change the overall credit requirements.

The Italian delegation reads the following declaration, prepared by its Government :

« The financial Italian Authorities are expressing a reservation concerning the proposition to modify article 6 of the rules of the retirement plan proposing to transfer into the general OIML budget the interests accrued from the investments of the retirement fund, the management of which should remain autonomous. In fact, these interests must be used to increase the resources of the fund in order to provide for the cost of the retirement benefits. On the contrary, if these interests are accounted for in the budget as income of the Organization, the Member States would have to cover all the charges not covered by the retirement fund whilst it is known that they already cover 2/3 of the fund, given that 1/3 is covered by the personnel and in consequence concerning the financial estimates for 1986 which we have just examined, the Italian delegation expresses reservations, also in respect of the receipts relating to the interests on investments which should not include, for the reasons already given, the interests on the retirement fund ».

Mr. KOCH expresses reservation in relation to the legal aspect of the problem : in Switzerland, the sums put aside in a retirement fund in order to be paid eventually as retirement pensions as well as the interests produced by these sums belong to the employees, even if it is being managed by the employer. Mr. KOCH follows on stating that it is quite possible to invest the moneys of the retirement fund with other moneys provided that one calculates the part of interests which have to revert to the retirement fund. Mr. ATHANÉ considers that this solution would cause practical difficulties.

Madam HENRION and Mr. OHLON express the same reservations as their Swiss colleague.

Mr. HASCHE does not see any objection to the proposal of the Director of the Bureau provided that it would not result in any modification of the contributions of the Member States.

In answer to questions from Messrs NIEUWLAND and KOCH, respectively, Mr. ATHANÉ indicates that :

- at present, he is not aware of any details of the operation of the retirement plan of BIPM,
- in the case of the dissolution of OIML (or serious financial problems), the question of retirement pensions would have to be examined at the same time as other financial questions.

In reply to Mr. HARVEY, it is confirmed that OIML pays no taxes on the interests produced by investments, it being understood that individual retired officers receiving a pension would have to fulfil their obligations vis-à-vis the tax regulations of their countries.

After these comments several Committee Members, among them Messrs ISSAEV and PETERSEN declare that the proposition of the Bureau should be accepted.

Mr. BIRKELAND then, requests the Committee to take a decision by a nominal vote of which the results are as follows :

YES : F.R. of Germany, German D.R., Australia, Austria, Brazil, Bulgaria, Cameroon, Canada, P.R. of China, D.P.R. of Korea, Cuba, Denmark, Egypt, Spain, United States of America, Finland, France, Hungary, Indonesia, Ireland, Japan, Kenya, Monaco, Norway, Pakistan, Netherlands, Poland, United-Kingdom, Tanzania, Czechoslovakia, Tunisia, USSR, Yugoslavia.

NO : Belgium, Italy, Sweden, Switzerland.

The proposal of the Bureau is thus accepted.

5. IMPLEMENTATION OF THE DECISIONS OF THE 7th CONFERENCE

Mr. ATHANÉ recalls the decisions of the 7th Conference and summarizes the actions taken in consequence, which allows Mr. BIRKELAND to conclude that their implementation is correctly carried out.

6. PLANNING OF WORK

6.1. EXAMINATION OF THE 1985-1988 DRAFT WORK PROGRAMMES

Mr. BIRKELAND recalls the reasons for which the Conference decided to introduce a planning procedure in the working method of the OIML Secretariats. He summarizes the action undertaken for this purpose by the Committee, the Presidential Council and the various Pilot and Reporting Secretariats resulting in the presentation of the draft work programmes to the Committee which in certain cases are accompanied by comments of Member States or the Bureau. He then requests the Committee Members representing the countries responsible for Pilot Secretariats to present the work programmes they are concerned with. As pointed out by Mr. BIRKELAND, these brief presentations are not intended to start a discussion, except in special cases, or when there are basic objections against the draft, or in case of proposals to create or to suppress Secretariats. The detailed comments shall be examined by the experts of the Pilot and Reporting Secretariats concerned who are free to introduce any necessary improvements or modifications into the work programmes.

(BIML note : these presentations which in most cases reproduce the contents of the work programmes are not presented in this report. Only the decisions and discussions relating to certain Secretariats are given below).

Suppression of Secretariats :	SP 7-Sr 1 « Terminology (mass) »
	SP 7-Sr 6 « Price-computing weighing instruments » (to be dealt with by SP 7-Sr 4)
	SP 12-Sr 1 « Terminology (temperature) »
	SP 13-Sr 2 « Wattmeters »
	SP 13-Sr 7 « Terminology (electricity) »
New allocations	: SP 6-Sr 3 « Differential pressure gas meters », France
Creations of Secretariats	: SP 5D-Sr 8 « Electromagnetic meters », not yet allocated
	SP 5D-Sr 9 « Vortex meters », Japan
	SP 17-Sr 5 « Measurement of hazardous wastes pollution », USA
	SP 30-Sr 13 « Breath testers », France

being understood that these creations become final only if the conditions laid down in the « Working method of the OIML Secretariats » are complied with. In addition, the Bureau is instructed to carry out inquiries concerning the creation of international working groups of these Secretariats.

The Committee instructs the Presidential Council to examine the situation of the following Secretariats :

- SP 1 « Terminology » as well as the Reporting-Secretariats dealing with the terminology within other Pilot-Secretariats,
- SP 14 « Acoustics and vibration »,
- SP 16 « Ionizing radiation » and SP 17-Sr 3 « Measurement of radionuclide pollution »,
- SP 27-Sr 2 « Classification of reference materials »

as well as the possible creation of new Secretariats which should deal with « uncertainties of measurement » and « recalibration intervals » (within SP 21 and SP 23 respectively).

Finally, the Committee instructs the Bureau to carry out an inquiry concerning the possible creation of new Secretariats which should deal with « mass meters » (within SP 5D) and « luxmeters » (within a Pilot-Secretariat yet to be defined).

The following Secretariats were the subject of discussions :

- SP 21 « Terminology » : following the contradictory proposals from Mr. PODGORSKI, who suggests the systematic creation of Secretariats « Terminology » within all fields of OIML work, and from Mr. EDGERLY, who suggests systematic suppression of all Secretariats « Terminology » except SP 1-Sr 1, Mr. BIRKELAND decides that the Presidential Council will examine this problem.
- SP 4 « Lengths » : it is recalled that ISO attaches some importance to the activities of the mixed ISO-OIML working group on the terminology of dimensional metrology.
- SP 5D « Volume of liquids » : at the request of Mr. NIEUWLAND, the problem of the verification of mass meters, for example of the Coriolis type, should be re-examined since meters of this type are more and more frequently used and it would be appropriate for OIML to start work in co-operation with ISO.
- SP 14 « Acoustics and vibration » : on a proposal from Mr. MÜHE to consider suppression of this Pilot-Secretariat, Messrs KOCH and PETERSEN, responsible for SP 14-Sr 1 and 3 respectively express reservations inducing Mr. BIRKELAND to decide that the Presidential Council will examine this problem.
- SP 16 « Radiation » : Mr. ZSDANSZKY underlines that the International Atomic Energy Agency hopes that the OIML International Document on « Secondary standards dosimetry laboratories » will be published as soon as possible.
- SP 16 « Radiation » and SP 17-Sr 3 « Radionuclide pollution » : on a request from Mr. IIZUKA, Mr. BIRKELAND decides that the Presidential Council will examine the relation between these Secretariats. Mr. THULIN recalls that in spite of its title, SP 17-Sr 3 should deal with instruments and not with measurement methods.
- SP 17 « Pollution » : Mr. EDGERLY requests his colleagues of the Committee to strengthen their participation in the work of SP 17, by contacting the national bodies which deal with the problems of pollution and by convincing them to work for OIML ; its activity (concerned with instruments) differs clearly from the activities of ISO and IEC and does not duplicate their work.
- SP 21 « Metrological characteristics of measuring instruments » : the proposal of Mr. ISSAEV to create a new Secretariat on the uncertainties of measurement should be examined in close liaison with the activity of the BIPM-IEC-ISO-OIML working group dealing with the same subject. Mr. BIRKELAND decides that the Presidential Council will examine this problem.

- SP 23 « Verification devices » : on a proposal from Mr. ISSAEV, Mr. BIRKELAND decides that the Presidential Council will examine the request from Czechoslovakia to create a new Secretariat dealing with recalibration intervals.
- SP 27 « Reference materials » : Mr. ISSAEV expresses reservation on a proposal by Mr. EDGERLY to suppress Sr 2 dealing with classification of reference materials and Mr. BIRKELAND decides that the Presidential Council will examine this problem.
- SP 30 « Physico-chemical measurements » : Mr. ATHANÉ recalls the request from IUPAC to revise RI 54 « pH-scale » in order to take into account the new pH scale.
- « Photometry » Mr. THULIN recalls the results of the inquiry carried out by the Bureau on this subject. It appears that it is possible for OIML to proceed with work on certain types of instruments, without duplicating the work of CIE (*) but taking that work as a base. Mr. IIZUKA mentions the work of IEC/TC 172. Mr. CLAPHAM considers that OIML risks encountering difficulties if it tries to fix accuracy classes for luxmeters, given that the CIE experts were not able to reach a satisfactory conclusion on this subject. Mr. KOCH indicates his interest to participate in the OIML work on this subject, taking into account the Swiss experience in the field of lighting of streets and tunnels. Mr. THULIN states that, depending on the countries, different bodies are responsible for the legislation on the problems of lighting and that it is difficult for OIML to obtain the participation of all the experts, if the Metrology Services do not make an effort to establish liaisons with the national bodies which deal with these problems. Mr. BIRKELAND states that similar discussions have already taken place during earlier meetings of the Committee without reaching a tangible result. He decides that the Bureau will carry out a final inquiry on the creation of a new Secretariat dealing with luxmeters and that this Secretariat will automatically be activated provided that a country accepts the responsibility for it and that there is a sufficient number of collaborating participants.

6.2. Adoption of the final work programmes

At the conclusion of this examination the Committee adopts the following resolution :

The International Committee of Legal Metrology

HAVING TAKEN NOTE of the draft work programs elaborated by the different Pilot Secretariats for the 1985-1988 planning period,

HAVING TAKEN NOTE of the comments submitted on this subject by certain Member States,

HAVING HEARD the oral presentations of Committee Members responsible for the Pilot Secretariats,

NOTING that the planning work was carried out according to the directives established for this purpose by the Presidential Council of the CIML and adopted by the Committee and the Conference in 1984,

CONGRATULATES the Pilot and Reporting Secretariats on the work already completed,

INSTRUCTS the Secretariats to implement their respective work programs, taking into account, as far as possible, all the comments and advice received, including the remarks from the Presidential Council concerning those work programs which the Committee has referred to the Council for supplementary study, as appropriate,

REQUESTS the Secretariats to use the annual reports in order to compare the actual progress of the work with the forecasts made,

INSTRUCTS the Bureau to prepare a harmonized presentation of the work programs for 1985-1988, in particular, in order to provide information for those International Institutions which are active in the fields linked with those of the OIML.

(*) CIE : International Commission on Illumination.

6.3. Directives for future planning

In order to guide the Secretariats and the Bureau in their future planning activities the Committee adopts the following resolution :

The International Committee of Legal Metrology

CONSIDERING the advantages of an appropriate planning procedure for the work of the OIML Secretariats,

EXPRESSING its satisfaction with the planning work for the 1985-1988 period,

CONSIDERING however that this procedure could be improved,

INSTRUCTS the Presidential Council to study the necessary improvements and to submit its proposals to the Committee, either by correspondence or during the 22nd CIML meeting but in any case in good time so that planning for the 1989-1992 period may be carried out according to this improved procedure.

7. WORK OF SECRETARIATS

7.1. Examination of the state of progress of the work :

Mr. TURSKI presents in turn :

- the document « State of progress of the work of OIML Secretariats » which gives Secretariat after Secretariat, an overall view of the work achieved and the work in progress,
- a summary of the annual reports, which is presented in a very different form than that used in previous years.

Mr. BIRKELAND expresses the satisfaction of the Committee on the new presentation of this summary.

On a question from Mr. NIEUWLAND, the Bureau gives information on the forecasts concerning the printing of the International Document which were already adopted by the Committee, in particular, of two Documents developed by SP 21-Sr 1 and 2, of which the publication was delayed because of editorial problems.

7.2. Provisional adoption of draft International Recommendations

Two draft Recommendations are submitted for adoption (provisional) by the Committee in order to permit their publication before submission to the 8th Conference for definitive sanction, possibly after they have been completed or improved.

a) Heat meters

Mr. MÜHE recalls that the Reporting Secretariat has worked for many years on this subject and that it was difficult to arrive at a consensus. He proposes that this draft should be provisionally adopted by the Committee it being understood that in the final draft, to be presented to the Conference in 1988, the requirements concerning electronics will be included and that an attempt will be made to take into account, as far as possible, the comments submitted by the Member States.

Mr. PETERSEN regrets that the comments of the Member States were not attached to the draft presented to the Committee and declares that the text is still incomplete. He considers that under these conditions it could not in fact be presented to a vote by the Committee.

Mr. MÜHE replies that provisional adoption and publication of the text even if incomplete is of some use in order to guide the States in the drafting of their regulations. He repeats that all comments will be examined and taken into consideration, as far as possible, in the preparation of the definitive draft.

The draft is then submitted to a vote of the Committee and is adopted with the following results :

YES : F.R. of Germany, German D.R., Australia, Austria, Belgium, Brazil, Bulgaria, Cameroon, Canada, Dem. People's Rep. of Korea, Cuba, Egypt, Spain, United-States of America, Finland, France, Hungary, Indonesia, Ireland, Italy, Japan, Kenya, Monaco, Norway, Pakistan, Netherlands, Poland, United-Kingdom, Switzerland, Tanzania, Czechoslovakia, Tunisia, Yugoslavia.

NO : Denmark, Sweden.

ABSTENTIONS : P.R. of China, USSR.

b) Electronic weighing instruments

Mr. EDGERLY recalls that the elaboration of this draft has spanned 5 years in parallel with that of the International Document « General requirements for electronic measuring instruments » which has already been adopted.

At the request of Mr. CLAPHAM it was confirmed by Mr. EDGERLY that there is still some more work to be done on Annex 2 concerning durability, with reference to adaptation of the dry heat and damp heat (steady state) tests to check durability. The working group and the Member States agreed that before the Conference in 1988 and final sanction of the draft the Pilot Secretariat will resolve the problem of Annex 2.

The draft is then submitted to a vote of the Committee and is adopted with the following results :

YES : F.R. of Germany, German D.R., Australia, Austria, Belgium, Brazil, Bulgaria, Cameroon, Canada, P.R. of China, Dem. People's Rep. of Korea, Cuba, Denmark, Egypt, Spain, United-States of America, Finland, France, Hungary, Indonesia, Ireland, Italy, Japan, Kenya, Monaco, Norway, Pakistan, Netherlands, Poland, United-Kingdom, Sweden, Switzerland, Tanzania, Czechoslovakia, Tunisia, USSR, Yugoslavia.

7.3. Different types of OIML publications

Mr. EDGERLY indicates that this question was broached by the Presidential Council and that the Council instructed him to present a study on this subject to the Committee. He presents a summary of this study with the following conclusions :

- a) there is no need to change the status and aims of International Recommendations,
- b) the definition of International Documents given in the « Working method of OIML Secretariats » is sufficiently wide to permit publication of all types of manuals, guides, etc. which the Committee considers suitable as having the character of International Documents. It is however recommended that the International Documents continue to be approved by the Committee.
- c) there is an increasing demand for a third type of publications which would cover the needs such as the consolidation of Recommendations and Documents, the reports of seminars, various articles, etc. These « special publications » could be published by decision of the Bureau. There remains however one difficulty to solve ; in the case of a compilation of Recommendations, should the original Recommendations be superseded, or should the Recommendations first be revised if a modification is required ? In the opinion of Mr. EDGERLY the consolidation should not modify the technical contents of the original Recommendations which remain the responsibility of the originating Reporting Secretariats, especially in case of revision or updating.

Mr. THULIN recalls that for many years now the Bureau has been drafting and publishing brochures, without considering it necessary neither to give them a name nor to number them, in order to avoid confusion with the official OIML publications (RI's and DI's). There was in fact already on some occasions, confusion between the numbering of the RI's and DI's, and a third category of publications with its own numbering would increase the risk of confusion.

Mr. EDGERLY considers that on the contrary, the numbering of the new category of publications would permit easy identification and would facilitate references to these publications.

Mr. KOCH considers that it would be possible to date the special publications instead of numbering them.

Mr. PETERSEN touches upon a particular point of the proposals of Mr. EDGERLY, the consolidations of the existing Recommendations. He considers that it is a very interesting possibility, the more so that one could use this consolidation in order to update the technical requirements which were overtaken by modern technology. However, one question arises : should the original Recommendations remain as drafted (in that case the compilation is a simple grouping together), or should they be replaced by new Recommendations which are consolidated ? In general, Denmark would prefer the second solution.

Mr. THULIN indicates that there is a difficulty of translation into French of the English « consolidated ». The action could consist of a sort of selection and a summary of information contained in the Recommendations, which may be dangerous. On the other hand one could proceed as in ISO by publishing « Handbooks » which are simply collections of standards on the same subject published as handbooks in a smaller size but with no modification or interpretation of the text of these standards ; this is something very useful.

Mr. CLAPHAM agrees with the majority of the proposals of Mr. EDGERLY with the exception of those concerning the publication of compilations of Recommendations without the approval of at least the Committee ; this would risk diminishing the status of those compilations.

Mr. BERTRAN considers that on the contrary there would be no danger of this happening and he quotes as example the AFNOR publications. He requests however that attention should be given to the designation of this third category of publications and especially to the abbreviations to be used since in English « Special publication » would be rendered as SP, a possible confusion with the Pilot Secretariats.

Mr. THULIN recalls that the abbreviations and initials used in OIML should be those as used in the French language (RI and not IR, DI and not ID, etc).

Mr. EDGERLY expresses first of all his agreement with the comment made by Mr. BERTRAN. Concerning the interventions from Messrs CLAPHAM and PETERSEN, he explains that in his opinion the compilations should change nothing of the original Recommendations, except for editorial modifications. As example, he quotes what was done by Australia for the OIML Recommendations on weighing which were rearranged as a manual giving the manufacturers the metrological, technical and administrative requirements. At present, a manufacturer of weighing instruments has to examine half a dozen of separate Recommendations, which means that he is expected to know that these Recommendations exist, which may not always be the case. The compilations should therefore change nothing of the original Recommendations, which rest under the responsibility of the originating Reporting Secretariats and must remain in existence as individual Recommendations.

Mr. BIRKELAND expresses some apprehension concerning the extend of the modifications which could be introduced in respect of the existing Recommendations by means of the compilation process. In particular, he has some hesitation on the advisability to authorize a Reporting Secretariat or the Bureau to prepare publications presenting modifications, even editorial ones, in respect of the Recommendations already sanctioned by the Conference.

Mr. HARVEY considers that the proposal from Mr. EDGERLY may lead to a great number of modifications of the original texts, even if these modifications are only editorial. Since Mr. EDGERLY has mentioned the « Design manuals »

prepared by Australia he would like to point out that these manuals only regroup several OIML Recommendations on the same subject and reproduce very exactly the requirements.

Mr. IIZUKA considers that the compilation work should be left to the national authorities : they should first translate the OIML Recommendations into the national language and then elaborate the compilations of these translations.

Mr. ISSAEV supports the point of view expressed by the Japanese delegate.

In conclusion of these discussions, Mr. BIRKELAND decides that the Presidential Council should study in detail the whole of the problem and then propose to the Committee to take decisions on the following basis :

- it should be officially recognized that the Bureau, on its own or with the participation of a Secretariat or another working group may prepare and decide to publish publications which are neither International Recommendations nor International Documents,
- the designation of these publications, the manner of their indexing, etc. must be examined,
- the problem of consolidation of Recommendations must be studied separately, since there may not fit into any of the above mentioned categories of publications ; in fact we may be dealing with two types of compilations :
 - a) several Recommendations concerning the same subject may be assembled without any modifications and the set is published in an appropriate form : this could be a decision of the Bureau, the original Recommendations remaining in force,
 - b) on the basis of several Recommendations, a unique text is elaborated intended to replace the original Recommendations (updated if necessary) ; this procedure should be under the control of the Committee or even of the Conference, since the original Recommendations would disappear.

In addition, the compilation could in certain cases be replaced by an « analytical summary » giving for a set of Recommendations dealing with the same subject the location of individual requirements ; these summaries could be prepared by the originating Secretariat and be published by the Bureau.

Mr. BIRKELAND then broaches the particular problem of the OIML vocabularies.

In the name of the Polish delegation, Mr. PESTRAKIEWICZ gives a summary of the SP 1 proposal :

- to examine the advisability of creating a special designation and numbering system for the different OIML vocabularies, and
- to set up Reporting Secretariats « Terminology » in all the fields of OIML work.

Mr. BIRKELAND decides that this question should be examined by the Presidential Council, in liaison with that of the different categories of publications.

The Polish delegation expresses agreement but insists on the urgency of this study.

8. ROLE AND RESPONSIBILITY OF CIML MEMBERS

Mr. ATHANÉ indicates that this brochure is in the process of being published and will be distributed shortly after the Committee meeting.

9. DEVELOPING COUNTRIES

Mr. GOMEZ ROSELL, President of the OIML Development Council recalls that the Council has just held a meeting during the two days which preceded the meeting of the Committee. The report of the discussion is still in a draft stage and copies of this draft were distributed for information to the participants of

the Committee meeting. Mr. GOMEZ ROSELL requests Mr. THULIN, who assisted in the preparation and the secretariat of the Development Council meeting, to give a summary of this report.

Mr. THULIN stresses the following main points :

- unfortunately, it would seem that the intentions of the developed countries to act in favour of the developing countries are diminishing. This may be due to the economic world situation,
- very few of the developing countries, except those invited by OIML, were able to participate in the meeting of the Council,
- the participants were invited to present the activity of their respective countries in the matter of assistance programme and it appears that certain industrialized countries already provide wide ranging programmes of assistance and training,
- a enquiry set up by the President of the Development Council and distributed by the Bureau provided a better grasp of the needs of the developing countries in particular concerning training ; the BIML was instructed to inform the industrialized countries of these training needs as well as of the material training requirements (in particular audiovisual) and of verification equipment,
- studies should be carried out on the problems of instrumentation which affect the export of products from developing countries as well as the realization of primary and secondary measurement standards and their calibration,
- the question of the OIML subscriptions of developing countries should be examined,
- the Development Council has approved brochures on equipment and the setting up to laboratories elaborated by an ad hoc group and the Bureau,
- the Council has re-examined the activity of SP 31 and was informed of the progress of co-operation between UNESCO and USSR in the field of scientific and metrological training,
- the participants became acquainted with an audiovisual presentation of the Metrological Research Institute of Cuba which commences in 1986 an annual training course for developing countries,
- the representatives of the countries present have given information on the training opportunities available in their countries,
- information was also given on the seminars organized by IMEKO,
- finally, a draft work programme for 1987-1988 was established to be submitted to the Committee for adoption.

(BIML note : this programme can be found in the report on the meeting of the Development Council).

Mr. ATHANÉ points out that, in conformity with the wishes of many of the participants of the 8th Conference it was possible to profit from the good financial situation of the Organization and to invite to the meetings of the Council and of the Committee five representatives of developing countries instead of four, as originally foreseen.

On a question from Mr. IIZUKA, Mr. THULIN indicates that the next meeting of the Development Council could take place in Cuba, in April 1988, linked with a seminar. However, several countries stress the financial difficulties which would arise from the obligation to make two long voyages during the same financial year, one to Cuba, the other to Australia for the 8th Conference. No final decision was therefore taken and the problem will be examined later.

At the conclusion of this presentation, Mr. BIRKELAND states that the draft work programme 1986-1988 for the Development Council can be considered approved. He congratulates Mr. GOMEZ-ROSELL who has been re-elected by the Council as its President for a further period of two years.

10. RELATIONS WITH OTHER INTERNATIONAL INSTITUTIONS

a) ISO TAG 4

This working group, which was instructed to harmonize the metrological aspect of the ISO work and to serve as a unification forum between BIPM, IEC, ISO and OIML had met during the two days preceding the meeting of the Committee. Messrs. BIRKELAND and EDGERLY participated as representatives of the standardization Committees of their countries, Messrs BERTRAN, ATHANÉ and TURSKI as representatives of OIML. Mr. TURSKI gives a summary of the discussions and decisions :

- the VIM will be the subject of an immediate slight revision ; a more serious revision is planned for 1987-1990,
- the ISO-OIML mixed working group on terminology of dimensional metrology was the subject of a discussion which confirmed that this work is of interest to both Organizations,
- it was considered useful to co-ordinate the activities of IEC, ISO and OIML in the matter of metrological terminology,
- the ISO group on the metrological aspects of standardization was re-established,
- ISO and IEC are ready to provide assistance to OIML in the preparation of a catalogue of symbols and abbreviations for metrological characteristics and functions of measuring instruments,
- a BIPM-IEC-ISO-OIML joint group was set up to study the practical application of the BIPM report on uncertainties.

b) Bodies for metrology and standardization in Western Europe.

Mr. ATHANÉ recalls that the Commission of the European Communities has decided to modify its working methods for developing the technical directives (including those for measuring instruments) ; the new directives will be limited to the essential requirements and will be completed by the European standards developed by the European Committee for Standardization (CEN) and the European Committee for Electrotechnical Standardization (CENELEC). This approach to regulation could equally be followed by the European Free Trade Association (EFTA).

Mr. ATHANÉ points out that he has established the necessary contacts with CEN and CENELEC and that he has informed the OIML Member States of the EEC and EFTA. On a question from Mr. KOCH, Mr. ATHANÉ indicates that the problem of reciprocal recognition of metrological tests between the Member States of EEC and the Member States of EFTA is a question concerning these Institutions and not OIML.

c) Council for Mutual Economic Assistance (CMEA)

Mr. ATHANÉ recalls that with Mr. BIRKELAND he visited in June 1985 the Secretary General of CMEA in order to confirm the wish of OIML to continue and to strengthen its co-operation with CMEA so that, as far as possible, the metrological standards established by that Institution be based on the corresponding OIML Recommendations.

In March 1986, Messrs. ATHANÉ and PETIK took part in a meeting of the Metrological Section of CMEA in order to apply, in practice the decisions taken previously on the co-operation between CMEA and OIML.

Mr. PODGORSKI takes the floor and presents the results of the discussions between CMEA and OIML during this meeting :

- detailed review of the problems of common interest between CMEA and OIML,
- participation of CMEA in the OIML work,
- analysis of the OIML International Recommendations and Documents in view of their adoption as CMEA standardization documents,

- transmission to BIML of CMEA standardization documents in view of their possible use as OIML preliminary drafts,
- harmonization of metrological terminology used by CMEA with that of OIML,
- examination of the possibility of implementing within the framework of the CMEA multilateral agreement the OIML guidelines on bi- and multilateral recognition of test results, pattern approvals and verifications,
- reciprocal exchange of articles to be published in the information bulletins of the two Institutions,
- reciprocal information on the dates and agendas of meetings in view of reciprocal participation.

M. PODGORSKI concludes confirming, in the name of all his CMEA colleagues present, the CMEA wish to develop its co-operation with OIML.

d) Other questions

Mr. ZDANSZKI provides information on certain activities of the International Atomic Energy Agency (IAEA) in the field of dosimetry and on the co-operation with the OIML Secretariats concerned, in particular SP 16-Sr 2.

Mr. THULIN mentions the excellent co-operation between IEC and OIML which developed largely in the field of electronics. He requests the Members of the Committee to help BIML to reinforce further this co-operation.

11. OIML BULLETIN

Mr. THULIN presents to the Committee an oral report on the situation of the Bulletin :

- the number of articles being received by the Bureau remains low and many of the Bulletins are only filled due to the reproduction of presentations made during the technical seminars ; in addition, manuscripts in the French language are few,
- on the occasion of No. 100 of the Bulletin, an index of the first one hundred numbers was published,
- it is necessary for the Bureau to receive, as early as possible, any information on seminars, meetings, conferences, etc., which are held at national level so that they can be announced in the Bulletin in good time (this is important not only from the point of view of preparing the Bulletin but also to allow any participants to prepare their travels),
- the Bureau would like to receive from the Member States all the information on the publication of books and manuals on metrology in order to mention this in the column « literature ».

In the name of the Committee, Mr. BIRKELAND congratulates Mr. THULIN and the Bureau on the high quality of the OIML Bulletin.

12. OIML SEMINARS

Mr. THULIN recalls that after the success of the first two OIML seminars (electronics in Boras, and control of prepackages in Bern), a third seminar was organized in Paris on bulk weighing. For the first time, two languages were used, French and English, with simultaneous translation. This seminar organized with the assistance of the French Administration and the Federation of Weighing Instruments Manufactures, has brought together more than 100 participants and was a great success.

The next seminar is planned for May 1987 on the measurement of large quantities of liquids. There have been already many international conferences on the measurement of flows and volumes of liquids but the OIML seminar is not intend to duplicate this since it will be concentrated on the problems which concern most the services of metrology, that is to say the verification of installations and the gauging of storage tanks.

Mr. THULIN concludes by giving some information of the expected organization of this seminar.

Mr. BIRKELAND expresses the satisfaction of the Committee with this action.

13. OIML CERTIFICATION

13.1. Various activities

Mr. PETIK recalls that the question of mutual recognition of metrological controls started to be studied about 10 years ago. An ad hoc group was instructed to study the methods of operation of an OIML certification system. At the end of the work of this ad hoc group the Committee noted that for economic and political reasons beyond its control such a system could not be set up at present. Waiting for this to become possible, SP 2-Sr 4 under the responsibility of the Bureau was instructed to study the possibility of punctual actions which could favor the eventual setting up of an OIML certification system.

Four activities were defined and are proposed for study by the Committee :

- a) compilation, classification and dissemination of information concerning bi- and multilateral agreements on the recognition of test results, pattern approvals and verifications,
- b) possibility of a National Service of Metrology to take note of the reports on pattern testing by Services of other countries,
- c) reference to OIML requirements in the national decisions of pattern approval,
- d) declarations of conformity for export.

Concerning the activities a), b) and d), the Committee adopts the following resolutions :

a) *The International Committee of Legal Metrology,*

HAVING TAKEN NOTE of the report of SP 2-Sr 4,

HAVING EXAMINED the usefulness and the possibility of :

- a compilation, on a continuing basis, of information relating to bi- and multi-lateral systems of (mutual) recognition of test results, of pattern approvals and of verifications,*
- a classification of these agreements,*
- a distribution of this information,*

REQUESTS the CIML Members to supply to the BIML the required information if they consider this to be possible and useful,

REQUESTS the BIML to classify this information and to distribute it to Member States in a suitable form and at suitable intervals of time.

With respect to the draft presented by SP 2-Sr 4, this resolution is editorially amended as requested by Mr. CLAPHAM.

b) *The International Committee of Legal Metrology,*

HAVING TAKEN NOTE of the report of SP 2-Sr 4,

HAVING EXAMINED the interest which knowledge of the results of tests, that may have been carried out by other national metrology services, could have for certain national metrology services to which a submission for pattern approval of the same instrument was made,

URGES the CIML Members to facilitate the exchange of such information, which in principle may only be provided with the agreement of the manufacturer of the instrument concerned.

With respect to the draft presented by SP 2-Sr 4, this resolution is editorially amended as requested by Mr. BERTRAN.

Furthermore, Mr. FANNING expressed his great satisfaction on the adoption of this resolution which should make it possible to avoid a lot of duplication of work between the Member States. However, in order that this resolution may be effectively implemented « points of contact » should be set up so that efficient liaisons between the Member States can be established. These points of contact could be in certain cases the Members of the Committee themselves, and in other cases, other points of contact between the Services of metrology should be established.

Mr. KNAPP asks whether the exchange of information mentioned in the resolution should be limited to « positive » information (in the case of instruments which passed the tests successfully), or whether also « negative » information should be communicated.

Mr. BIRKELAND confirms that the exchange of information may concern the two cases ; however, in the case of negative information, the manufacturer may make objections.

Finally, Mr. ATHANÉ recalls that it had been envisaged for the Bureau to hold notices of all the pattern approvals granted by the Member States. This activity was not retained since it would face enormous difficulties of realization and practical operation.

d) *The International Committee of Legal Metrology,*
HAVING TAKEN NOTE of the report of SP 2-Sr 4,

URGES the CIML Members and the national metrological services to issue, on request, declarations of conformity for a measuring instrument or a series of measuring instruments, suitably identified, which meet the requirements established by OIML for the instrument in question,

POINTS OUT that these declarations of conformity serve for information only and impose no obligation on the national metrological service of the importing country,

RECOMMENDS the declarations of conformity to be in a form as shown in the example given hereafter. ()*

With respect to the draft presented by SP 2-Sr 4, this resolution is editorially amended as requested by Mr. NIEUWLAND.

Mr. THULIN recalls that the declaration of conformity had already been proposed for study by the Presidential Council in order to help developing countries who are importers of measuring instruments.

Mr. EDGERLY whilst recognizing that in principle he has no objection to this resolution declares that as far the USA is concerned this question is an exclusive matter for the internal legislation of the States and he cannot therefore engage himself on this point.

Mr. HARVEY indicates that if Australia decides to provide such declarations it would most probably add a sentence disclaiming any responsibility of the national Authorities.

Mr. ZSDANSZKY states that in Hungary, the decisions of pattern approval and verification of course belong to the national metrological Authorities, but the tests on which these decisions are based may very well be carried out wholly or partially by other bodies. This Resolution may therefore be useful.

Concerning the action c), the following draft resolution was suggested to the Committee :

(*) see page 38.

Draft Resolution CIML 1986 — POINT 13.1.c

The International Committee of Legal Metrology,

HAVING TAKEN NOTE of the report of SP 2-Sr 4,

URGES the CIML Members and the national metrological authorities to mention in national pattern approval decisions that the metrological requirements and/or test methods are based on the requirements established by OIML, whenever this applies.

This proposal is the subject of many negative comments.

Mr. BERTRAN states that it would be a case of interference with the formal presentation of pattern approval decisions which are administrative acts depending on the regulations in each Member State. In addition, he fears that such action will lead to contentious problems because one could interpret in different manner the correspondence between National and OIML requirements. Mr. BERTRAN concludes stating that even if the Committee resolutions are not committing the Member States they are nevertheless adopted in order to be implemented and that in this particular case he could not agree to a resolution which he would not be able to implement.

Mr. CLAPHAM supports the statement of Mr. BERTRAN. A national pattern approval decision does not allow for any flexibility in its interpretation. Therefore he does not oppose the adoption of the resolution but considers that in the United Kingdom it will not be implemented frequently.

Mr. DIFFO indicates that in his Country it would be difficult to make reference to non national requirements in statutory acts such as pattern approval decisions.

Messrs. ISSAEV, KNAPP, KOCH, NIEUWLAND and PESTRAKIEVICZ suggest a certain number of modifications to the text of the resolution in order to make it more precisely defined.

Before the discussion gets out of hand, Mr. BIRKELAND considers it necessary to proceed with a nominal vote at the end of which the draft resolution is rejected with the following results :

YES : F.R. of Germany, German D.R., Australia, Brazil, Bulgaria, Canada, P.R. of China, D.P.R. of Korea, Cuba, Denmark, Egypt, Spain, United-States of America, Finland, Hungary, Ireland, Italy, Japan, Kenya, Norway, Poland, United Kingdom, Sweden, Czechoslovakia, USSR, Yugoslavia.

NO : Austria, Belgium, Cameroon, France, Indonesia, Morocco, Monaco, Pakistan, Netherlands, Switzerland, Tanzania.

13.2. Examination of the draft International Document « Guidelines for bi- or multilateral arrangements on the recognition of test results - pattern approvals - verifications »

Mr. PETIK presents this draft developed by SP 2-Sr 4. At the conclusion of a nominal vote, this draft is adopted with the following results :

YES : F.R. of Germany, German D.R., Australia, Austria, Belgium, Brazil, Bulgaria, Cameroon, Canada, P.R. of China, D.P.R. of Korea, Cuba, Denmark, Egypt, Spain, Finland, France, Hungary, Indonesia, Finland, Italy, Japan, Kenya, Morocco, Monaco, Norway, Pakistan, Netherlands, Poland, United-Kingdom, Sweden, Switzerland, Tanzania, Czechoslovakia, Tunisia, USSR, Yugoslavia.

NO : United-States of America.

13.3. Directives for future activities

Mr. ATHANÉ recalls that one of the actions proposed by SP 2-Sr 4 (reference to OIML in the national pattern approval decisions) was not accepted by the Committee and it may therefore be appropriate to reflect on this subject. Furthermore, it may be appropriate to examine the possibility of a common action with IEC and ISO whenever there exist simultaneous OIML RI's/DI's and ISO/IEC Standards for the same category of instruments. BIPM could also be associated whenever certification is based on measurement standards traceable to those of BIPM.

Mr. ISSAEV supports this last idea and indicates that CMEA is in the process of examining the possibility to co-operate with other Institutions on the bases of some already existing CMEA documents.

Mr. OHLON also supports this proposal. With reference to this subject he recalls the procedure of a closer co-operation between the European Community and the European Free Trade Association intended to eliminate technical barriers to trade and to create a « West European Common Market ». In this connection, he describes the action of the Swedish Administration in order to harmonize the national regulations with those of the EEC and to participate in the new approach in the matter of technical regulations which would call on CEN and CENELEC standards. He is pleased about the information given by the Bureau on the closer co-operation OIML-CEN-CENELEC (see point 10 above) but he recommends that in addition OIML should follow very closely the certification activities within Western Europe and to participate in those as far as possible.

Mr. CLAPHAM expresses serious reservations with reference to the second proposal of Mr. ATHANÉ. In fact, the Members of the Committee are concerned with legal metrology and measuring instruments within the field of legal metrology and, in this connection, one should recognize that the OIML Recommendations are effectively developed with reference to their application in legal metrology which is not necessarily the case for the ISO and IEC standards. The OIML certification system should exclusively be based on OIML RI's and DI's. Mr. CLAPHAM is even more opposed to any association of BIPM in this action. It seems to him impossible for BIPM to deliver certificates for the traceability of working standards to their own standards. This is a matter which concerns exclusively the national laboratories or the accredited calibration centers.

Messrs. EDGERLY and NIEUWLAND fully support the reservations of Mr. CLAPHAM and request that no action should be undertaken before the Committee had time to study in detail the proposal and had taken a decision on this subject.

Mr. BIRKELAND considers that the Committee is not prepared to hold such a discussion at this moment. However, it seems that the developments in the matter of international certification are considerable and rapid ; one should note that SP 2-Sr 4 has correctly accomplished the tasks which were entrusted to it in 1983 but that since then new developments have occurred. At his request, the Committee agrees to the suggestions that the Presidential Council should study these developments and should submit new proposals to the Committee in 1987 or 1988. During this time, SP 2-Sr 4 should continue to study the problem limiting its activity to follow the tasks which were entrusted to it and without taking any new initiatives.

14. REPORT ON ACTIVITY OF BIML

A report covering the activity of BIML between October 1984 and March 1986 was distributed to the participants.

15. PREPARATION OF THE 8TH CONFERENCE

Mr. HARVEY confirms the invitation of the Australian Government for October 1988. The year 1988 is a very significant year since it commemorates the bicentenary of European settlement in Australia. As indicated in 1984 by Mr. PETRY, the former Committee Member for Australia, arrangements have already been made for the period from 24 to 28 October 1988 (hotel reservations and conference room, receptions, lunches for the delegates, etc.). At the same time, the problems of translation, of secretariats and of technical visits is being studied and information on touristic programmes will also be given to the delegates and accompanying persons.

Mr. HARVEY concludes indicating that 1988, being as already mentioned an anniversary, will be a very busy year and it is necessary that the number of delegates which will participate in the Conference and of the accompanying persons be known as soon as possible.

Mr. BIRKELAND thanks Mr. HARVEY for his report and all the already accomplished preparatory work. Mr. BIRKELAND requests Mr. HARVEY to transmit the best wishes of the Committee to Mr. PETRY. Finally he requests his colleagues of the Committee to study already the problem of their participation in the Conference and reminds them that in the case of any difficulties concerning their personal participation, it is their responsibility to request their Governments to designate other delegates, for example from amongst the diplomatic representations in Australia.

16. PREPARATION OF THE 22nd COMMITTEE MEETING

The Committee is in agreement with the proposal of Mr. BIRKELAND to hold the next Committee meeting in Paris, September 1987.

*
**

PRESIDENCY and VICE-PRESIDENCY of the COMMITTEE

Mr. BIRKELAND recalls that he and Mr. ISSAEV were elected as President and Vice-President respectively, in 1980 and that their mandates of 6 years have now been completed.

He assures his colleagues that he acted as President of the Committee with great interest and pleasure during these six rewarding and profitable years even if on occasion difficulties arose which had to be overcome.

He wishes to express his thanks to his colleagues for the co-operation which they have shown him.

He therefore withdraws, with Mr. ISSAEV, and hands over the presidency of the Committee to the Second Vice-President.

Mr. MÜHE first of all points out that a very close and fruitful co-operation always existed between the President and the two Vice-Presidents of the Committee as well as the Director of the Bureau.

He reminds his colleagues that Messrs BIRKELAND and ISSAEV have indicated their willingness to accept a renewal of their mandates if this should be the wish of the Committee.

This proposal received unanimous support of the Members of the Presidential Council which met in Braunschweig in September 1985.

Furthermore no other candidate was proposed and Mr. MÜHE therefore requests the Members of the Committee to approve the renewal of the mandate of Mr. BIRKELAND as President and that of Mr. ISSAEV as Vice-President.

The Committee indicates its agreement by acclamation and Messrs BIRKELAND and ISSAEV return to their places at the Presidential table.

Messrs. BIRKELAND and ISSAEV express their warm thanks to the assembly and Mr. BIRKELAND then indicates that the mandate of the second Vice-President Mr. MÜHE will become vacant the moment he takes his retirement as Director of the Physikalisch Technische Bundesanstalt, in May 1986.

On the proposal by Mr. BIRKELAND the Committee elects by acclamation Mr. EDGERLY, United States of America, as Second Vice-President.

Mr. EDGERLY thanks his colleagues for this honour and sign of confidence and assures them that he will continue to do his best in furthering the objectives and the missions of OIML.

Mr. BIRKELAND then takes the floor again and following his proposal the assembly unanimously nominates as HONORARY MEMBERS of the INTERNATIONAL COMMITTEE of LEGAL METROLOGY Mr. MÜHE, Federal Republic of Germany and Mr. LIERS, German Democratic Republic.

CLOSURE of the MEETING

Mr. BIRKELAND thanks his colleagues for the effort and work accomplished which permitted to arrive at a number of decisions of importance for the life of OIML.

He comments, in particular, that the Committee was able to concentrate on a study of essential problems, leaving the less important points to other working groups. He is pleased that every body has shown his understanding of the importance and extent of OIML work. In the name of the Committee he thanks Mr. BERTRAN, CIML Member for France, for the very pleasant reception offered by the French Administration. He also expresses his thanks to all the experts of the Pilot and Reporting Secretariats who have contributed so much to the technical contents of the planning work of the Committee. He concludes with a request to his colleagues on the Committee to return to their respective Countries and to watch over the implementation of the decisions of the Committee and invites them to a rendezvous for the next meeting, in September 1987.

RESOLUTIONS and DECISIONS

DECISION CIML 1986 — POINT 1

The Committee approved the report of the 20th CIML meeting without modification.

DECISION CIML 1986 — POINT 2

The Committee took note of the report on the anticipated accessions of new Member States and Corresponding Members, as well as on the situation of two Corresponding Members (Fiji and Jamaica) considered as no longer being part of the Organization because of non-payment of their subscriptions.

DECISION CIML 1986 — POINT 3.1

The Committee approved the accountant report for 1984 and instructed its President and the Director of the Bureau to submit it to the Eighth Conference.

DECISION CIML 1986 — POINT 3.2

The Committee took note of the accountant report for 1985 and instructed its President and the Director of the Bureau to submit it for approval during the 22nd CIML meeting.

DECISION CIML 1986 — POINT 3.3

The Committee took note of the financial estimates for 1986.

DECISION CIML 1986 — POINT 4.1

The Committee extended the contract of Mr PETIK, Assistant Director, for 2 years. In addition, it took note of the information concerning the replacement for Mr TURSKI, Consultant Engineer, who will take his retirement in March 1987.

DECISION CIML 1986 — POINT 4.2

The Committee decided :

- a) *to raise the salary scale of the Administrator by 12 %,*
- b) *to authorize the Director to extend the salary scales of the Principal Secretary and of the Documentation Clerk linearly, by one or two additional increments, this decision applying to the two staff members who are at present working for the Bureau, without any modification of the staff regulations.*

DECISION CIML 1986 — POINT 4.3

The Committee decided to modify the detailed rules of the retirement plan as follows :

« RD 6. *The Director of BIML will invest the monies of the retirement fund to the best advantage of return and security ; the interests accrued will be paid into the general OIML budget.*

RD 8. *A staff member
..... ; the interest accrued remaining in the general OIML budget ...»*

DECISION CIML 1986 — POINT 5

The Committee took note of the report on the implementation of the decisions of the Seventh Conference.

DECISION CIML 1986 — POINT 6.1

The Committee

suppressed the Secretariats :

SP 7-Sr 1 « Terminology, mass »

*SP 7-Sr 6 « Price-computing weighing instruments »
(work to be dealt with by SP 7-Sr 4)*

SP 12-Sr 1 « Terminology, temperature »

SP 13-Sr 2 « Wattmeters »

SP 13-Sr 7 « Terminology, electricity »

took note of the attribution to France of the responsibility for

SP 6-Sr 3 « Differential pressure gas meters »

created the Secretariats : ()*

SP 5D-Sr 8 « Electromagnetic meters »

(responsible country = X, international working group being set up)

SP 5D-Sr 9 « Vortex meters »

(responsible country = Japan, international working group being set up)

SP 17-Sr 5 « Measurement of hazardous wastes pollution »

(responsible country = USA, international working group being set up)

SP 30-Sr 13 « Breath testers »

(responsible country = France, international working group being set up)

() subject to the conditions laid down in the « Working method ».*

instructed the Presidential Council to study the situation of :

SP 1 « Terminology »

SP 14 « Acoustics and vibration »

SP 16 « Ionizing radiation »

SP 17-Sr 3 « Measurement of radionuclide pollution »

SP 27-Sr 2 « Classification of reference materials »

as well as that of the Reporting Secretariats the creation of which was proposed :

— study of uncertainties (SP 21)

— recalibration intervals (SP 23)

instructed the Bureau to carry out an enquiry on : mass meters, luxmeters.

RESOLUTION CIML 1986 — POINT 6.2

The International Committee of Legal Metrology

HAVING TAKEN NOTE of the draft work programs elaborated by the different Pilot Secretariats for the 1985-1988 planning period,

HAVING TAKEN NOTE of the comments submitted on this subject by certain Member States,

HAVING HEARD the oral presentations of Committee Members responsible for the Pilot Secretariats,

NOTING that the planning work was carried out according to the directives established for this purpose by the Presidential Council of the CIML and adopted by the Committee and the Conference in 1984,

CONGRATULATES the Pilot and Reporting Secretariats on the work already completed,

INSTRUCTS the Secretariats to implement their respective work programs, taking into account, as far as possible, all the comments and advice received, including the remarks from the Presidential Council concerning those work programs which the Committee has referred to the Council for supplementary study, as appropriate,

REQUESTS the Secretariats to use the annual reports in order to compare the actual progress of the work with the forecasts made,

INSTRUCTS the Bureau to prepare a harmonized presentation of the work programs for 1985-1988, in particular, in order to provide information for those International Institutions which are active in the fields linked with those of the OIML.

RESOLUTION CIML 1986 — POINT 6.3

The International Committee of Legal Metrology

CONSIDERING the advantages of an appropriate planning procedure for the work of the OIML Secretariats,

EXPRESSING its satisfaction with the planning work for the 1985-1988 period,

CONSIDERING however that this procedure could be improved,

INSTRUCTS the Presidential Council to study the necessary improvements and to submit its proposals to the Committee, either by correspondence or during the 22nd CIML meeting but in any case in good time so that planning for the 1989-1992 period may be carried out according to this improved procedure.

DECISION CIML 1986 — POINT 7.2

The Committee provisionally adopted two draft International Recommendations :

— Heat meters

— Electronic weighing instruments

and instructed the responsible Secretariats to introduce the necessary supplements and/or improvements before their submission for final sanction by the Eighth Conference.

DECISION CIML 1986 — POINT 7.3

The Committee instructed the Presidential Council to study the problems of different categories of OIML publications, on the basis of the proposals presented by Mr EDGERLY, and also the problems concerning the OIML vocabularies on the basis of the proposals presented by Mr PODGORSKI.

DECISION CIML 1986 — POINT 8

The Committee took note of the report on the publication of the brochure : « Guide for CIML Members ».

DECISION CIML 1986 — POINT 9

The Committee took note of the report presented by the Chairman of the Development Council and approved the draft work program for 1986-1988.

DECISION CIML 1986 — POINT 10

The Committee took note of the reports on the relations between OIML and various International and Regional Institutions and requested the Bureau to continue its activities in this field.

DECISION CIML — POINT 11

The Committee took note of and expressed its satisfaction with the report on the OIML Bulletin and encouraged the Bureau to continue its efforts.

DECISION CIML 1986 — POINT 12

The Committee took note of and expressed its satisfaction with the information on the technical seminar held in April 1985 and the intentions of the Bureau to organize another seminar in 1987.

RESOLUTIONS CIML 1986 — POINT 13.1

*The International Committee of Legal Metrology,
HAVING TAKEN NOTE of the report of SP 2-Sr 4,
HAVING EXAMINED the usefulness and the possibility of :*

- a compilation, on a continuing basis, of information relating to bi- and multilateral systems of (mutual) recognition of test results, of pattern approvals and of verifications,*
- a classification of these agreements,*
- a distribution of this information,*

REQUESTS the CIML Members to supply to the BIML the required information if they consider this to be possible and useful,

REQUESTS the BIML to classify this information and to distribute it to Member States in a suitable form and at suitable intervals of time.

The International Committee of Legal Metrology,

HAVING TAKEN NOTE of the report of SP 2-Sr 4,

HAVING EXAMINED the interest which knowledge of the results of tests, that may have been carried out by other national metrology services, could have for certain national metrology services to which a submission for pattern approval of the same instrument was made,

URGES the CIML Members to facilitate the exchange of such information, which in principle may only be provided with the agreement of the manufacturer of the instrument concerned.

The International Committee of Legal Metrology,

HAVING TAKEN NOTE of the report of SP 2-Sr 4,

URGES the CIML Members and the national metrological services to issue, on request, declarations of conformity for a measuring instrument or a series of measuring instruments, suitably identified, which meet the requirements established by OIML for the instrument in question,

POINTS OUT that these declarations of conformity serve for information only and impose no obligation on the national metrological service of the importing country,

RECOMMENDS the declarations of conformity to be in a form as shown in the example given hereafter. ()*

DECISION CIML 1986 — POINT 13.2

The Committee adopted the International Document « Guidelines for bi- and multilateral arrangements on the recognition of : test results - pattern approvals - verifications ».

DECISION CIML 1986 — POINT 13.3

The Committee instructed the Presidential Council to follow the developments in the field of certification, on the basis of studies carried out by SP 2-Sr 4, and to report on this matter during the next CIML meeting.

DECISION CIML 1986 — POINT 14

The Committee took note of the report on the activities of the Bureau during the period October 1984 - March 1986.

DECISION CIML 1986 — POINT 15

The Committee took note of the report presented by the Delegation of Australia and the Bureau on the preparations for the Eighth Conference, which will take place in Sydney from 24 to 28 October 1988.

DECISION CIML 1986 — POINT 16

The Committee decided that the 22nd meeting will take place in Paris, September 1987.

(*) see page 38.

*PRESIDENCY and VICE-PRESIDENCY of the COMMITTEE
HONORARY MEMBERS of the COMMITTEE*

The Committee re-elected for a 6-year period :

as President Mr. K. BIRKELAND, Norway

as 1st Vice-President Mr. L.K. ISSAEV, U.S.S.R.

The Committee elected for a 6-year period :

as 2nd Vice-President Mr. D.E. EDGERLY, U.S.A.

The Committee nominated as Honorary Members :

Mr. W. MÜHE, Fed. Rep. of Germany

Mr. H.W. LIERS, German Dem. Rep.

NATIONAL METROLOGY SERVICE

of

DECLARATION of CONFORMITY

(established according to OIML rules)

We, the National Metrology Service of

Member of the International Organization of Legal Metrology,

hereby certify at the request of
that the instruments measuring (quantity) type
manufactured by and graduated in units
bearing the manufacturer's serial numbers to
are, *subject to subsequent verification at their place of use*, in conformity with
the OIML Recommendations No and No

This conformity was established by an (initial) verification supervised by the
national metrology service of
by means of (specify : factory authorization under
control of the national metrology service, individual verification (or verification
by sampling) by the local metrology office of etc.)

The (initial) verification was carried out under the following conditions :
..... (specify if necessary : ambient conditions, reference apparatus used,
etc.)

The instruments bear the following verification marks and identification numbers
applied by our service :

.....

Observations :

Certificate issued in
